There’s something rewarding about growing your own food, and nothing beats the taste of fresh fruit right off the tree! Producing your own food can be a valuable use of water! For best results and healthier trees, keep fruit trees out of the lawn and water them with drip irrigation. Click on any of the fruit photos below for more details on growing, watering, and caring for your trees:

Plant Highlight

Utah Penstemon
*Penstemon utahensis*

Blooming in the spring, this native penstemon has striking pink flowers on stalks that grow to be about 12” tall. It prefers well-drained soil and doesn’t need much supplemental water once it's established. Looks great paired with Shrubby Penstemons, Sundancer Daisies, Shrubby Sandworts, and other low-water natives.
